HG54587	Jeff Peterson	10657	Consumer	7/1/2024	10:30am	D. Harrison	Float Assembly	Plumbing	G413	5	10

- Assumptions:
- customerNumber is unique and links back to only one person
 - partNumber can be repeated (different people can buy the same product)

- Comments:
- The PK for this table is a combination of customerNumber, partNumber, and date. This is because if date wasn't part of the composite key, then the same customer can order the same item, but on a different day, which would result in two rows having the same PK values and we would not be able to distinguish between the two of them
 - Currently, the table is in 1NF

Normalizing to 2NF/3NF; creating tables for each of the partial dependencies for customerNumber and partNumber. Once it is in 2NF, no transitive dependencies exist, so the table is normalized to 3NF

Panacea Mental Health Corporatoin

<u>staffNo</u> PK	<u>date</u> PK	<u>time</u> PK	patNo	patName

The Maid Better Temp Agency

original_table

<u>eNo</u>	<u>contractNo</u>	hours	eName	eventNo	eventLoc
1135	C1024	16	Smith J	H25	Queens
1057	C1024	24	Hocine D	H25	Queens
1068	C1025	28	White T	H4	Yonkers
1135	C1025	15	Smith J	H4	Yonkers
1135	C1026	10	Smith J	H25	Queens

- Comments:
- Since no single field is unique, having a combination of two fields, such as eNo and contractNo, will work as a PK
 - Currently, the table is in 1NF

Normalizing to 2NF by creating separate tables for partial dependencies for the eNo and contractNo fields

<u>eNo</u>	<u>contractNo</u>	hours
1135	C1024	16
1057	C1024	24
1068	C1025	28
1135	C1025	15
1135	C1026	10

<u>eNo</u>	eName
1057	Hocine D
1068	White J
1135	Smith J

<u>contractNo</u>	eventNo	eventLoc
C1024	H25	Queens
C1025	H4	Yonkers
C1026	H25	Queens

Normalizing to 3NF by creating tables for any transitive dependencies, which applies to eventNo and eventLoc fields
